

Lanshore LLC's UiPath Installed Base Growth Offering

You probably know how powerful automation can be for improved sales or commissions performance. However, RPA doesn't always work out of the box. You must understand how your current systems are used, what data you really need and the ways in which new, automated systems will complement your processes every step of the way.

We can help. Our **client focused** methodology leverages UiPath technology, **backed by experts** with years of experience.

Half Day Intelligent Automation and Process Assessment Workshop

We collaborate with your teams to **interpret, contextualize and educate** on the automation ahead and the restructuring it may demand.

- **A full-service automation assessment.** We tell you what works and how to cut what doesn't.
- **A preliminary report** (PowerPoint) outlining areas for improvement.
- Our ROI proposal (Excel spreadsheet).
- **Access to our solutions experts.**

Full Week Process Assessment Workshop

Attain **navigational clarity on projected returns** such as lower costs, improved resiliency and freer human resources. We'll draw up an **ROI proposal** with pro forma investment, mapping milestones in the automation journey.

- **Identify** the right processes to automate
- **Prioritize** which automations to do first
- **Build** a business case
- **Understand** how to measure ROI
- **Implement** an automation program

Full Current State Gap Analysis with Roadmap

Developers can easily become trapped in just one or two automation processes, maintaining them without adding more and scaling up. Lanshore can **identify weaknesses in talent and resources** that risk bugs, user errors or slow deployment. From there, you'll have a **course correction for policies** that spur development instead of limiting it.

- **A state review** of hardware, applications, bot fleets, SDLC, change management and more.
- **Define the future state** of where your automation should be.
- **Complete reports** for gap analysis, current and future states and your general roadmap.
- **A three to six-week timeline** depending on the project's complexity.

Your hyperautomation success begins here!
